

Breaking it Down: Cotton's Biodegradability in Various Environments

With hundreds of easily searchable resources, we're your go-to textile tool for discovering what's possible with cotton.

Breaking it Down: Cotton's Biodegradability in Various Environments

Biodegradability of Cotton and Polyester in Soil

Disposing of old clothes...

What's the problem?

- ❑ The average American discards about 70 pounds of clothing per year¹
- ❑ Of that only about 10 pounds are donated
- ❑ The remaining 60 pounds end up in landfills
 - ❑ 327 million people in the US
 - ❑ 20 billion pounds of textile waste goes to US landfills each year

1. Council for Textile Recycling, 2014

Recycling Options

- ☐ Donation
 - ☐ Charities
 - ☐ Retailers
- ☐ Municipal recycling programs
 - ☐ Sort through the waste
 - ☐ Creates different streams
 - ☐ Convenience

What happens to fabrics in a compost pile?

- ❑ Today's landfills are good at preserving things.
- ❑ Little air, water, sunlight and bacteria available.
- ❑ How well would natural soil break down garments?
- ❑ Could back-yard composters convert their fabrics to soil?

Three biodegradation methods have been explored...

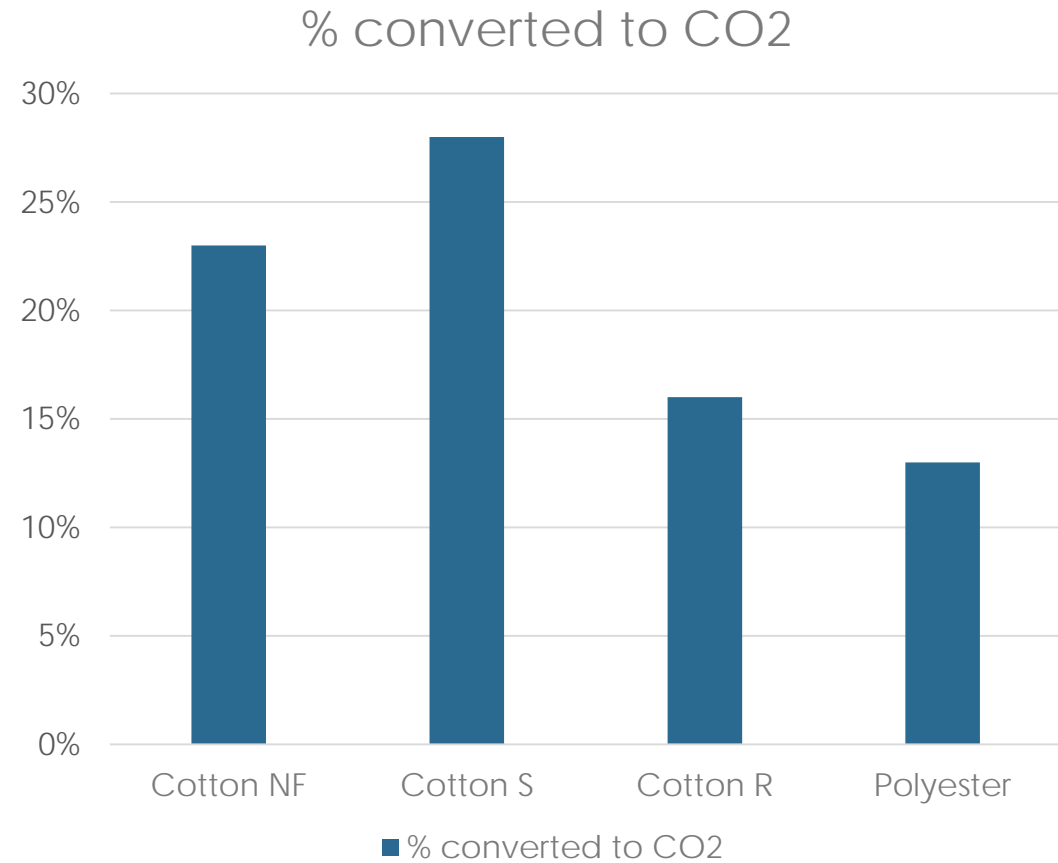

- ❑ ASTM D5988-03
 - ❑ Standard Test Method for Determining Aerobic Biodegradation in Soil of Plastic Materials or Residual Plastic Materials After Composting
- ❑ Composting in winrows at Cornell University
- ❑ ASTM D6400 Compostable Product Test
 - ❑ Controlled temperature, moisture level, carbon:nitrogen ratio
 - ❑ Compost bin was used

Design of Trials One and Two

ASTM D5988-03 and Composting

- ❑ Fabrics Evaluated
 - ❑ 100% cotton jersey, scoured and bleached, no finish
 - ❑ 100% cotton jersey, scoured and bleached, softener only
 - ❑ 100% cotton jersey, scoured and bleached, resin plus softener.
 - ❑ 100% polyester shirt
- ❑ Fabrics were laundered 30 times before testing
 - ❑ D5988-03 measures the generation of CO₂
 - ❑ In composting, weight loss is measured
 - ❑ Fabrics were exposed for 90 days

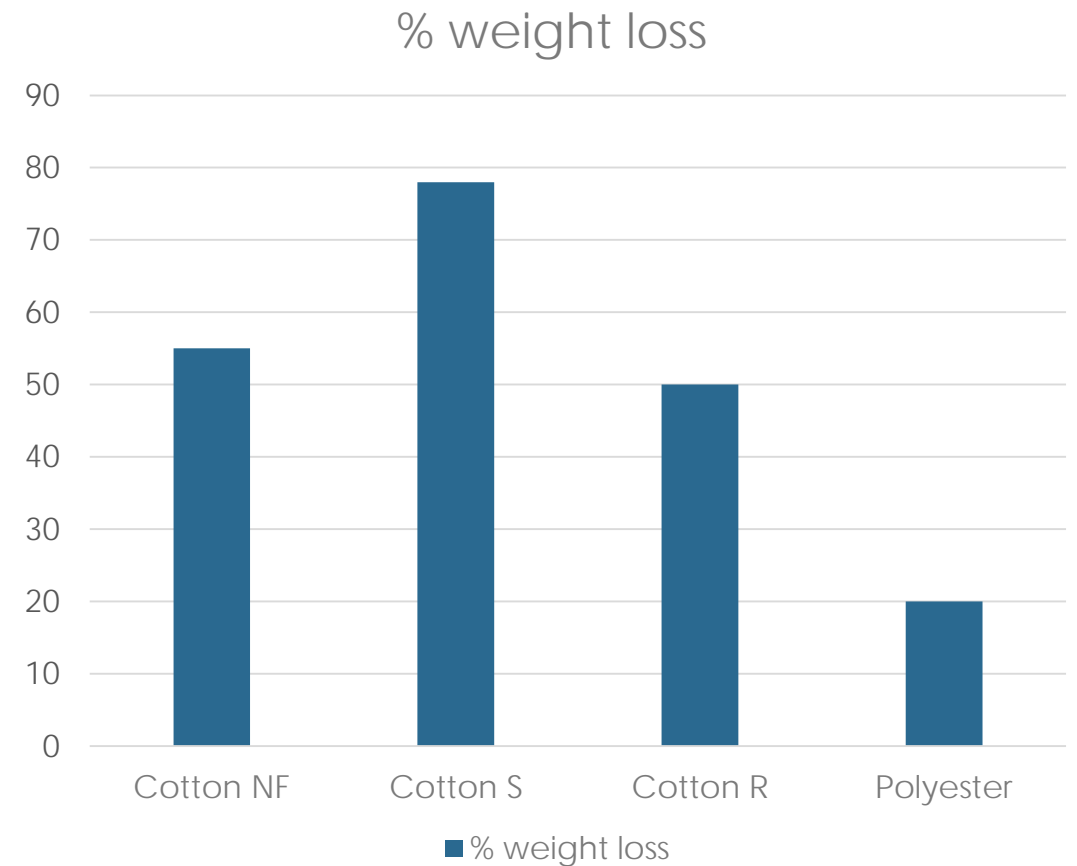

Results of ASTM D5988-03

Degradation of Fibers in Compost

Cornell University composting facility

Degradation in Soil

0 Days

90 Days

Design of Trial Three

ASTM D6400 (Biodegradability Testing in Compost)

- ❑ Fabrics Evaluated
 - ❑ 100% cotton jersey, scoured and bleached, softener only
 - ❑ 100% cotton jersey, scoured and dyed black, plus softener
 - ❑ 100% recycled polyester shirt
- ❑ Fabrics were laundered 30 times before testing
- ❑ Carbon-to-nitrogen ratio of 30:1
- ❑ Moisture content 45–50%
- ❑ Fabrics were exposed for 12 weeks (84 days)

Biodegradability of Wet Wipes

Cotton Nonwoven
Degradation in Soil

Methodology

- ❑ ASTM D-6400
 - ❑ Standard Specification for Labeling of Plastics Designed to be Aerobically Composted in Municipal or Industrial Facilities
- ❑ Materials tested
 - ❑ Spunlaced nonwovens
 - ❑ 100% virgin cotton
 - ❑ 100% virgin cleaned cotton
 - ❑ 100% purified cotton
 - ❑ 55% purified cotton/45% PP

Methodology

- ❑ Samples were prepared, weighed, and placed into an active compost vessel
- ❑ Every 2 weeks, samples were removed from the compost vessel, dried, weighed, and photographed
- ❑ Average percent biodegradability was calculated for each sample
- ❑ Biodegradability was accomplished at 90+% mass loss
- ❑ 100% cotton nonwovens biodegraded 90+% within 4 weeks

Nonwoven Results

100% Virgin Cotton Composting (ASTM D6400)

Sample #4

100% Virgin Cleaned Cotton Composting (ASTM D6400)

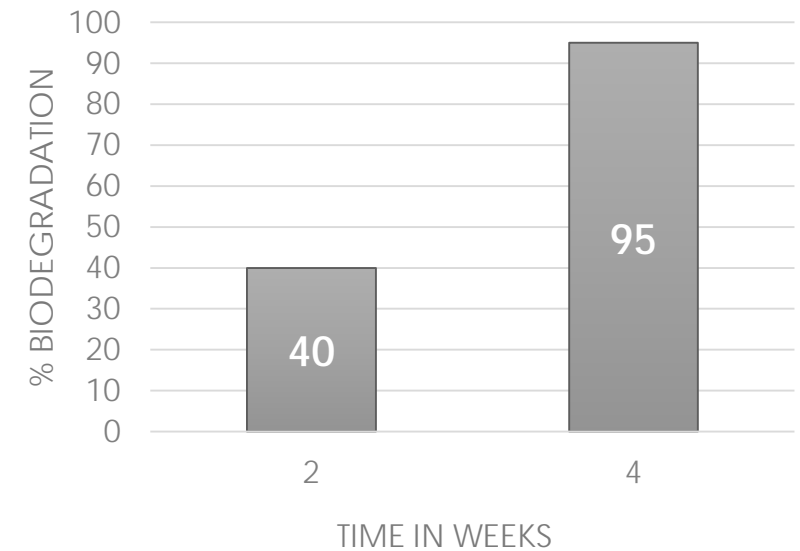

Sample #3

100% Purified Cotton Composting (ASTM D6400)

Sample #9

55% Purified Cotton/45% PP

Composting (ASTM D6400)

Sample #1

Conclusions

- ❑ Cotton wipes biodegrade quickly in a composting container
- ❑ 100% cotton: 92 – 95% in four weeks
- ❑ Blend: Cotton biodegraded; Polypropylene did not

Biodegradability of Wet Wipes

Flushability

Methodology

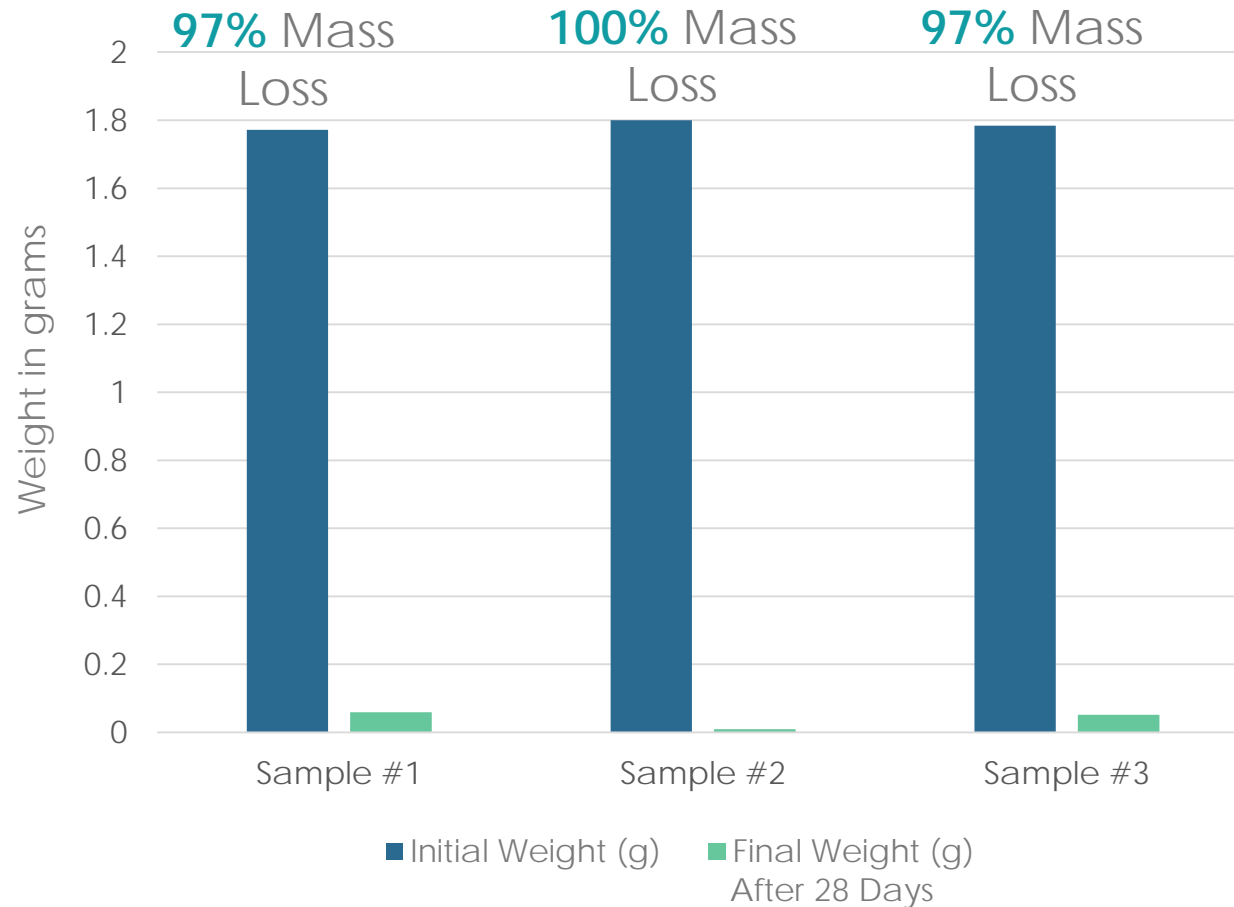

- ❑ Followed Guidelines for Assessing the Flushability of Nonwoven Disposable Products
 - ❑ INDA/EDANA
 - ❑ Developed as standards for the industry to produce wet wipes that can be marketed as flushable to consumers
- ❑ 2 Test Methods:
 - ❑ Aerobic Biodegradation (FG505)
 - ❑ Anaerobic Biodegradation (FG506)
- ❑ Materials Tested
 - ❑ 60 gsm nonwovens measured at approximately 2 grams per sample

Results

Virgin Cotton

Aerobic Biodisintegration (Sewer System)

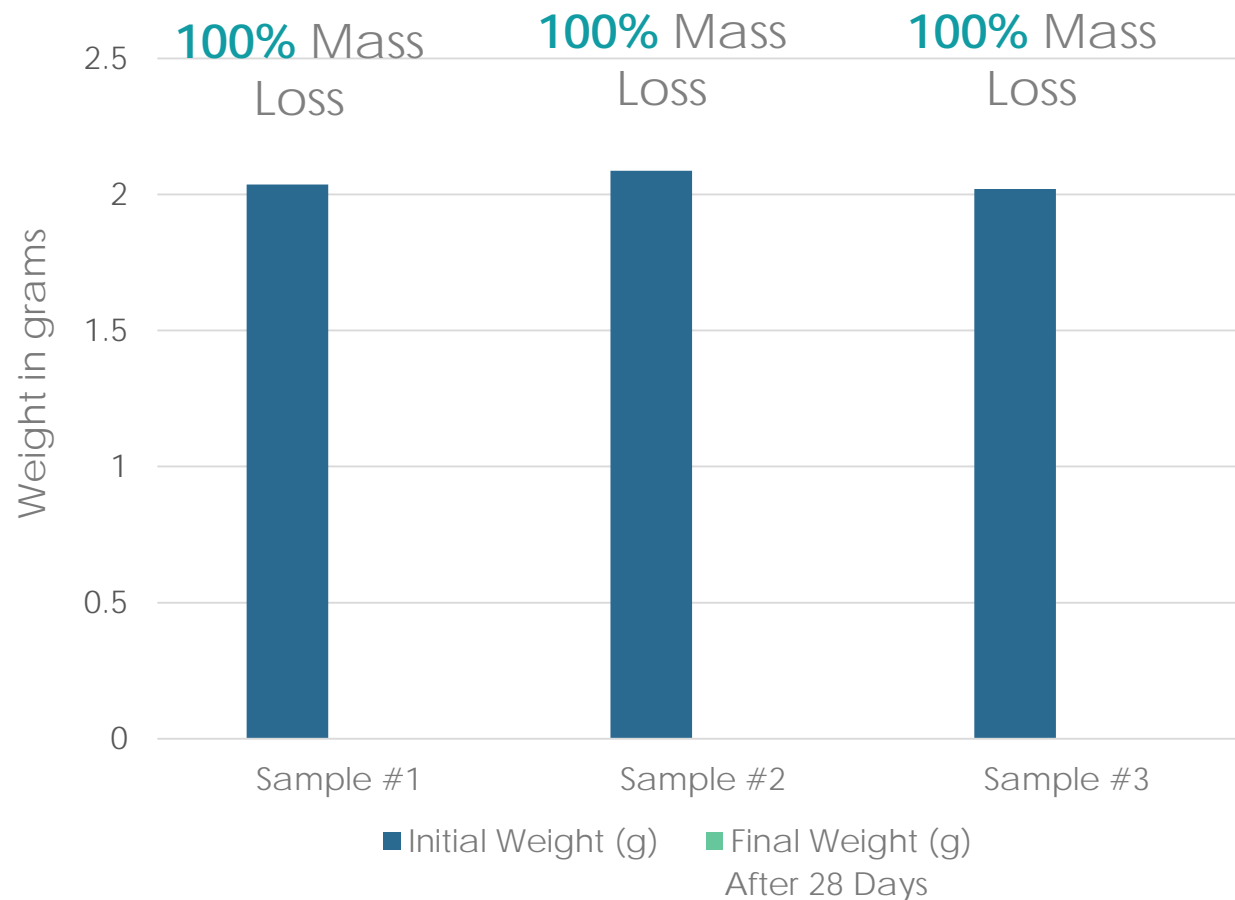

28 Day Test

Minimum Required Mass Loss: 95%

Average Mass Loss: 98%

Purified Cotton

Aerobic Biodisintegration (Sewer System)

28 Day Test

Minimum required mass loss: **95%**

Average mass loss: **100%**

Virgin Cotton

Anaerobic Biodisintegration (Septic System)

Purified Cotton

Anaerobic Biodisintegration (Septic System)

28 Day Test

Minimum required mass loss: **95%**
Average mass loss: **100%**

Conclusions

- ❑ Similar results to the composting test
- ❑ Purified cotton biodegraded faster than the virgin cotton
- ❑ Cotton – An example of the cycle of nature

Responsible Cotton Production

U.S. cotton production is on path to continual improvement, maximizing efficiencies while minimizing inputs.

Cotton LEADS™

The Cotton LEADS™ program strives to make sure cotton is produced responsibly now and for years to come.

Industry Profiles

Discover the stories of producers and brands as they lead the way to responsibly produce and manufacture cotton.
